## Flashlube Wins Gold...

The makers of Australia's number one selling Lead Replacement additive, Flashlube, has won the Gold Award for the Best New Aftermarket Chemical at the AAAA show for Flashlube Diesel Conditioner.

The Award is judged by an independent qualified panel of judges who inspect & assess all nominated products. The awards are open to all after-care products, including Australian & imported products. The award criteria covers the products innovation, quality & standard of packaging, market acceptance, & practicality of the product.

There are a few reasons why Flashlube won this year's Gold Award:

- It is specifically formulated to combat the effects of low sulphur diesel fuel, and is the only synthetic diesel additive on the market today.
- Flashlube uses the latest additive & lubricant technology available, keeping pace with ever changing fuel formulations.
- Flashlube Diesel Conditioner contains no sulphur and is a Non-Hazardous, Non-Poisonous product.

Flashlube stays ahead of the pack by researching fuel & additive markets around the world & understanding the requirements for each market. Look out for the Gold Award on all of the new Flashlube Diesel Conditioner packaging & point of sale material.

## "Runs Smoother ... More Power"

Alfred from WA, recently tested Flashlube Diesel Conditioner in his 100 Series Toyota Landcruiser.

He had always been sceptical of the effect of adding additives with diesel fuel. He ran down both tanks in the vehicle, refuelled, then added the amount of additive recommended.

Alfred says "The effect that Diesel Conditioner makes to diesel is noticeable. The engine appears to run smoother and it almost feels to provide a little more power". He continued to use the vehicle around the metropolitan area of Perth, until both fuel tanks were almost empty again. The performance of the Diesel Conditioner in his Landcruiser exceeded anything he had previously recorded. "Generally, we cover a little over 900 Km on the quantity of fuel held in both tanks. On this occasion I travelled 1100 Km".

Alfred is extremely happy with the performance of Flashlube Diesel Conditioner. "Every time I refuel our vehicle, I log the distance travelled and the litres purchased. Hence I am able to report that since 3rd April 2004 my consumption averaged 11.92 Litres/ 100 Km. The consumption during the above test was 11.31 L/100 Km. That is a 5.1% improvement".

### "This Stuff Works"

Alan from Wagga Wagga, NSW owns a 1999 Landrover Discovery TD5 & started using Flashlube Diesel Conditioner on long trips out of town.

On the first of three trips from Wagga to Merimbula (up over the mountains), Alan towed a 1.2 tonne boat & at the start of the trip nothing appeared to be any different.

After about 1-1/2 hours on the road, Alan noticed an improvement in performance, **"due to the injectors being cleaner"**, he said.

At first, Alan thought it may have been his imagination, as he has tried other products over the years but without satisfaction. Now he has driven three trips over the mountains, to the coast and back home again with fantastic results. Alan is **"convinced the 'stuff' works. I am half a gear better off on long steep pulls such as Talbingo and Brown mountains... and there was also a modest improvement in fuel economy"**.

Alan's vehicle is much more tractable and flexible around town and has toned down injector knock when the engine is cold. **"My vehicle has done 222,000 Kms and is in excellent condition. I hope Flashlube will also prolong the life of the injectors and other system components"**, Alan says.

### "Exceptional Product That Really Works".....

Bob from N.T has been using Flashlube Diesel Conditioner in his Toyota HJ61 Landcruiser - a 12 HT Turbo Diesel engine and four speed automatic transmission.

Bob reported excellent results with approximately 10% increase in fuel economy on long trips and around 6% around town. He said **"the engine is much quieter, as is the diesel knock"**.

**"Flashlube is very easy to use and the savings far exceed the outlay. It keeps the injectors and combustion area clean and will extend the life of the engine"**. **"It is an exceptional product which really works"**.
